Job Description

Responsibilities:

- Design, write, and execute **automated test scripts** to enhance software quality
- Ensure maximum **test coverage** for critical system features
- Document automated **testing procedures**, scenarios, and outcomes
- Collaborate closely with the QA Team Leader, Product Manager, Developers, Manual QA, and Product Owner to improve testing efficiency

Requirements:

- **3+ years** of experience in software development (JavaScript or similar languages)
- Proficiency in Git version control
- Familiarity with **popular IDEs** (IntelliJ, Visual Studio, etc.)
- Strong knowledge of **HTTP requests and REST APIs**
- Experience working in Agile environments
- Ability to work autonomously while staying responsive to team needs
- Strong teamwork and communication skills
- Fluent in **English**

Nice to have:

- Academic background in **Software Development**
- Experience with application load, stress, or performance testing
- Knowledge of Jest for testing
- **ISTQB** certification
- Experience with **Linux console**
- Familiarity with **UI testing tools** (Selenium, Cypress, etc.)

The company:

Join a thriving technology hub at the forefront of innovation, offering a dynamic and collaborative work environment. As an international company expanding rapidly, we provide exciting opportunities to work on cutting-edge projects in a multicultural and inclusive team.
